

The Smart Tracking Solution

NOVATRACK

**Communication
Server**

Control of the incoming messages sent by the devices
 This security feature allows to reject unregistered devices or devices with bad parameters.

Independent service for each couple Device-Port
 No connexion break for all clients when a new type of device is added or a driver is maintained.

Configure a type of device for various clients on one port.
 All devices of the same type, independently from the application and the applied business logic, can communicate to the same port.

Multiple ways to receive information
 Device communication through a TCP connection or Message communication through a Web Service.

Modularity & Interoperability
 Each customer can
 - choose to use the full solution or just a part of it.
 - have his own Business Logic.
 - choose to use his own database or to use a Novasys hosted database

The Communication Server plays a major role in the Location Based Services (LBS) allowing the mobiles devices to interact with the server(s). OnYourMap is offering a cutting-edge technology focusing on modularity, security and reliability.
